

Print

print displays output to your console

```
print('Hello world')
```

```
Hello world
```

Enclose strings in single or double quotes

```
print('Hello world single quotes')  
print("Hello world double quotes")
```

```
Hello world single quotes  
Hello world double quotes
```

Getting information from the user

```
name = input('Please enter your name: ')\nprint(name)
```

```
Please enter your name: Susan\nSusan
```

Printing blank lines can improve readability

```
print('Hello world')  
print()  
print('Did you see that blank line?')  
print('Blank line ¥nin the middle of string')
```

Hello world

Did you see that blank line?

Blank line

in the middle of string

Debugging with print

```
print('Adding numbers')  
x = 42 + 206  
print('Performing division')  
y = x / 0  
print('Math complete')
```

Adding numbers

Performing division

Traceback (most recent call last):

File "demo.py", line 4, in <module>

y = x / 0

ZeroDivisionError: float division by zero
